

CUSCO SPORT Blue spring

Realized linear load transfer with high-precision spring rate

*** Optimized "supple" design:**

Redesigned a spring pitch and helix angle to reduce an abrupt springing up at high-speed bump.

*** High strength · High durability:**

Double shot peening process to high tensile strength material "SWOSC-KV" to increase the strength.

*** Stable Spring Rate and tolerance:**

By the setting/prestressing process, drastically improves resistance performance, and will keep a stable spring rate even under harsh motor sport
