

# NEW PRODUCT INFORMATION

## GR86 & NEW BRZ DIFFERENTIAL DRIVE PINION DISTANCE COLLAR

«Applicable Vehicle»  
GR86 ZN8 / BRZ ZD8

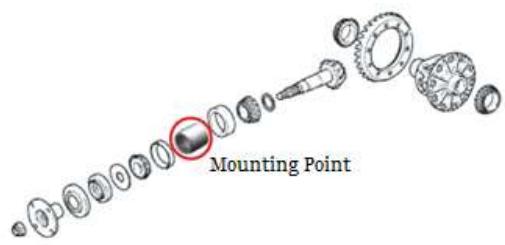

**CUSCO Pinion Distance Collar prevents problems such as rear differential noise, damage and deformation even after hard driving conditions.**

The genuine "crush type collar" which is used to adjust the preload of the rear differential pinion gear eventually increases in backlash over time due to high load driving, therefore, changing to our "shim adjustment type collar" will help suppress the issue and also prevent damages to the differential gear and other parts.

We recommend to install the CUSCO pinion distance collar when changing LSD and final gear.

Factors that increases load on the collar

- Increase in traction when using LSD
- Increase in engine power
- Using high grip tires
- Increase in braking force when using high performance brakes
- Sports driving such as circuit driving, gymkhana, etc.
- Improved transmission response when using reinforced clutch.
- etc...

- ✓ When installing this product, adjusting the preload requires separate Nissan genuine part "adjustment washer for drive pinion preload". Kindly purchase the required parts at a Nissan genuine parts dealer.
- ✓ Please refer to the table beside for the correct part and part number required.

Nissan Genuine Part shim thickness and part number

Thickness(mm)	Part Number	Thickness(mm)	Part Number	Thickness(mm)	Part Number
3.81	38125-61001	3.91	38130-61001	4.01	38135-61001
3.83	38126-61001	3.93	38131-61001	4.03	38136-61001
3.85	38127-61001	3.95	38132-61001	4.05	38137-61001
3.87	38128-61001	3.97	38133-61001	4.07	38138-61001
3.89	38129-61001	3.99	38134-61001	4.09	38139-61001
